

Janusz M. Smulko was born in Kolno, Poland. He is a member of IEEE Instrumentation & Measurement Soc. He received the M.Sc., Ph.D. and D.Sc. degrees in electronics from Gdansk University of Technology, 80-952 Gdansk, ul. G. Narutowicza 11/12, Poland, in 1989, 1996 and 2007, respectively. His doctoral research was in $1/f$ noise measurements in high frequency bipolar transistors. Presently, he is working in Faculty of Electronics, Telecommunication and Informatics, Gdansk University of Technology, on problems of low frequency noise measurements and analysis. In 2003, He joined the Fluctuation and Noise Exploitation Laboratory at the Department of Electrical Engineering, Texas A&M University, College Station, TX, USA, as a NATO Post-Doctoral Fellow. His main research activity was concentrated on application of $1/f$ noise measurements for gas sensing. In 2006, He received STINT Foundation scholarship for research and teaching in Uppsala University. This activity is concentrated on preparation of the new mono-sized nanoparticle gas sensors and electrochromic windows reliability characterization by low frequency noise measurements. Dr Janusz Smulko chaired and co-chaired the International conferences *Noise and Information in Nanoelectronics, Sensor and Standards II (Spain 2004) & III (Austin, USA 2005)*. His main activity is focused on nondestructive testing of electronic devices and various methods of chemicals detections.
